

Installation Instructions

Part Number: 046-016

Product: 1987-2004 Saleen LightBar Brake Shut-Off Switch

- Step 1. Set Convertible top in the down position.
- Step 2. Remove the upper and lower portion of the back seat assembly.
- Step 3. Locate the existing ground wire (negative -) from the lightbar.
Cut the ground wire and connect these two new ends into the two black wires of the Brake Light Shut-Off Switch. Since this is a ground switch, polarity is irrelevant. (See Illustration "A")
- Step 4. Locate the convertible top motor directly behind the upper portion of the back seat assembly.
The circuit to the motor has a two wire (red and yellow) lead. Unplug the wire connector to the motor and plug it into the Brake Light Shut-off Switch. Plug the wire coming out of the Brake Light Shut-Off Switch into the convertible top motor.

Note: Relay in the enabled/lamp on/top down position.

Warranty: This product is guaranteed against manufacturer defects 30 days from shipping. If the product is defective, please contact Saleen Parts Department Customer Service @ 800-888-8945.
